

ABSTRACT

In a speaker core (10) and a speaker unit using the same, a counter-mass (18), which utilizes the masses of a receiver circuit (31), a battery (32) and a case (33), is provided on one end side of a vibrator (12), and a vibration generated by using a drive coil (13) to drive the vibrator (12) to perform expanding/contracting movements is effectively transmitted to a diaphragm (20) positioned on the other end of the vibrator (12).
